

CS5281 Internet Application Development – Working with HTML

Using hand-written HTML, try to build a web page showing your schedule:

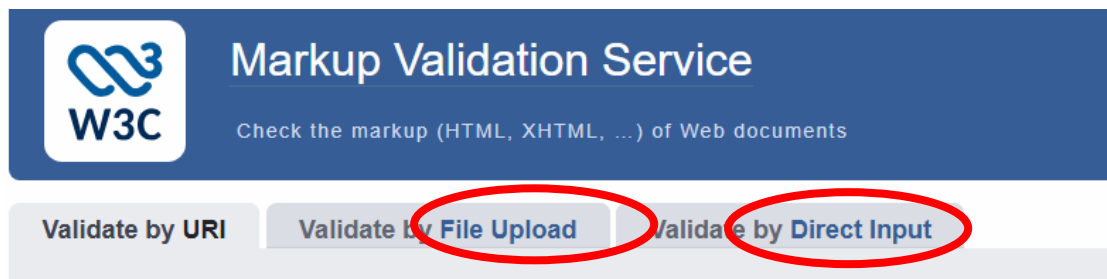

Requirements:

- The title of the page should be “My time table” 
- All elements (image, headings, table, caption...etc) should be centered.
(In this tutorial, you may use the easy (but obsolete) `<center>...</center>` tags to enclose all other HTML elements in body)
- On the top of the page, there’s a **hyperlink** connecting to the website of CityU. The link consist of the CityU logo (<https://template.cityu.edu.hk/template/img/logos/cityu.png>) followed by the banner of DEC (https://template.cityu.edu.hk/template/img/logos/cityu_dec.png)
- The logo should be shrink proportionally so that the **height** is 100 pixels
- The **width** of the DEC banner should be scaled to 400 pixels
- The description text of the logo should be “City University”. (Which will be shown if the picture fail to load, or if the browser does not support graphics)
- Draw a horizontal line (separator) below the CityU logo
(name of the tag: is `<hr>`, which means “**H**orizontal **R**ule”)
- The page contains two headings on two separate lines: “CS5281” (1st-level heading, which is largest) and “Internet Application Development” (2nd-level)

- The table should have a caption of “Schedule (Semester B 2025/26)”, underlined. (In this tutorial, you may use the `<u>...</u>` tags to underline the text)
- The table should contain at least 2 rows. On top of it, you should insert a **header** row (showing “**Day**”, “**Time**”, “**Classroom**”). You may add in extra rows and columns if you prefer.
- Show the border of table by setting the **border** attribute of `<table>` tag to **1**.
- Save the HTML file as “**TimeTable.html**”

(Optional) For interested students...

Interested students may send the page to the W3C validator (<http://validator.w3.org/>), using “**File Upload**” or Copy-and-Paste into “**Direct Input**”.

What can you observe from the validator report?

Submission

- Due date: On or before week 4 Friday (6-Feb) 11:59pm
- Students will upload the html file directly to Canvas
