

CS5281 Internet Application Development – Working with Forms

Create a HTML form which serves the purpose of user registration:

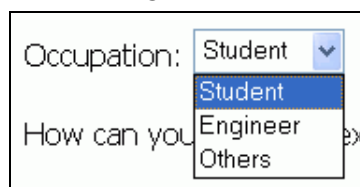

The screenshot shows a web browser window titled "User Registration". The form contains the following elements:

- Name:
- Email:
- Gender: ☒ Male ☐ Female
- Occupation:
- How can you know the existence of our site? ☐ Newspaper ☐ Magazine ☐ Friends
- Please briefly describe yourself in the space below:
- Register!

The HTML page should be occupied by a form (named “**Reg**”), which consists of:

- A name text field (name is ***userName***),
- A email text field (name is ***userEmail***)
- A group of radio buttons for user to select the gender (name is ***gender***)
(let's also set some internal values to the options)
- A group of checkboxes (name is ***ad***) to collect the “*source of information*”
- A text area (name is ***des***) of 5 rows and 80 columns
- A submit button which shows “**Register!**”
- And a drop-down list box consisting of three choices (name is ***occupation***)

Occupation:

How can you know the existence of our site? ☐ Newspaper ☐ Magazine ☐ Friends

In the list box, there are three options:

- “***Student***”, which carries an internal **value** of 1
- “***Engineer***” which carries an internal **value** of 2
- “***Others***” which carries an internal **value** of 3

After finishing the HTML page, save it as **Reg.html**, the file will be used later for the JavaScript and PHP tutorials.

Submission

- Due date: On or before week 5 Friday (13-Feb) 11:59pm
- Students will upload the html file to Canvas
