

CS5281 Tutorial : Format a page with Inline/Embedded CSS

Download *T3.html* from Canvas. *(the page is adopted from CityU webpage)*

With the help of **inline or embedded CSS**, format the page as follows:

- Format the first paragraph in size 14 pixel bold font.
- Headings (**Duties**, **Requirements**, **Salary...** and **Information...**) should be colored in blue, using size 16 Arial font.
- Paragraph under headings should be indented by 0.5 inch, the first line of each paragraph should be indented further by *about* 2 characters. Text should be justified on both sides.
- Set the background of document to pale yellow (100% red, 100% green, 80% blue)
- Move the last paragraph to the center of page. Render the text in italic font, underlined.

Question: Which method is better? Inline or Embedded?

You may find some hints from the lecture notes as well as internet resources such as:

<http://www.w3schools.com/css/default.asp>

Submission

- Due date: On or before week 6 Friday (27-Feb) 11:59pm
- Students will upload their work to Canvas.
