

CS5281 Internet Application Development: Tutorial on External CSS

Download ***Book.html*** from Canvas. The HTML file consists of the following items:

- Titles (“Textbook, Reference and Handouts” and “Assessment”)
- Subtitles (“Textbook”, “Reference / Optional Reading”, “Useful Web Sites”)
- Some point-form statements
- A Note at the end (*For a student to pass...must be obtained*)

In this tutorial, you need to apply the following changes using an external style-sheet file called “***Book.css***”. You’re not allowed to make any change to the HTML file.

- The page makes use of wallpaper from http://www.cs.cityu.edu.hk/~kclee/bcg_063.gif

- You need to resize the “**content**” division (line 9) of the page such that it occupies 80% of the window width. (*Optional*) If possible, put the division in the center of the page. (*Tips: you’ll need to use **margin-***)
- Use **borders** to draw a box surrounding the “**content**” division (5px thick). Top and Left borders are *lightgray*, while Bottom and Right borders are *gray*.
- Reserve internal spaces inside the box so that the text does not touch the borders. (Horizontal space (left/right): 30px, Vertical space (top/bottom): 10px)
- Titles (“*Textbook*”, “*Reference...*” and “*Assessment*”) should be shown in blue, uppercase, and underlined.
- Subtitles (“*Textbook*”, “*Useful websites*”...) should be bolded and in small-caps.
- Hyperlinks should be highlighted with the background image [back.gif](#) (*download from Canvas*). Links should have no underline.
- The last line (“*For a student...*”) should be drawn in 70% gray using a font size which is 80% as large as normal font. Make the line italic and place it in the center.

You may find some hints from internet resources such as:
